

April 23rd, 2023

To whom it may concern,

We, GeoWash International, hereby certify that the GeoWash car wash system is environmentally friendly.

The GeoWash system environmental improvement is based on two essential advantages:

- Optimizing energy and water management.
- Generating no pollutant wastewater by using eco-friendly supplies.

Traditional car wash systems demands between 60 and 350 liters of water per service, and generates in turn waste from oil, grease and up to other 13 polluting metals. The GeoWash concept uses an average of just 2 liters of eco-friendly formulas, significantly reducing water and energy consumption; and consequently reducing wastewater to a minimum.

Sincerely yours,

Alejandro Alperin
